When I press the Apply button, it should open a new sheet(sheet2) and open a new row and write cell1(A2 in this case) as column(Q2 in this case) as weight. I want this to be done when I click on that cell only. Please suggest an easy to use code. Thanks in advance. A: Assuming the current sheet has a name of "Table", you can try something like this: Sub Example() Dim wb As Workbook Set wb = ThisWorkbook With Application.Caller On Error Resume Next .Worksheets("Table").Activate On Error GoTo 0 .Cells(.Rows.Count, 1).End(xlUp).Offset(1, 0).Value =.Cells(.Rows.Count, 1).End(xlUp).Offset(0, 2) End With End Sub

"Unknown" One of the minor asteroids known as main-belt asteroids, small bodies between 7 and 300 kilometers across, has been discovered orbiting the Sun with a period of 50 years. The object, named 2010 JA12, has an orbital eccentricity of 0.4145 (which may indicate that it is not a perfect circle, rather a broad ellipse) and rotates every 72.5 days. It may be a dwarf planet. 2010 JA12 has a diameter of approximately 10 km, has the lowest density of known minor planets at 2.3 g/cm³ and is not a main-belt dwarf planet. References External links Category:Minor planet object articles (unnumbered) 20010304Q: How do I find the file system root block number and location with C#? I'm using a library to read binary files, from which I've been able to get the byte array that contains the bytes of the file and the the location of the first directory and the last directory. I now need to find the root of the file system, and the location of the start of the file. How would I go about doing this? A: You can do this with the Win32 API functions

GetVolumeInformation/GetVolumeInformationByHandle/GetFileInformationByHandle. FYI, what you're asking for is the "Volume Information", while the default access information consists of file attributes, ACLs, security descriptor, directory, symbolic links, etc. [DllImport("shell32.dll")] static extern uint GetVolumeInformation(string lpRootPathName, uint dwVolumeSerialNumber, ref uint lpVolumeSerialNumber, uint dwMaximumComponentLength, ref uint lpMaximumComponentLength, uint flag, [Out] ref uint lpVolumeNameSize, uint dwComponentType, uint dwComponentSubType, uint cbComponents, uint cbVolumeName, ref uint lpVolumeName); [DllImport("shell32.dll")] static extern uint GetVolume
